Photoluminescent Putty

Glow-In-The-Dark Photoluminescent Putty for Rotational Molding

- Hours of glow- No batteries, light bulbs or wiring is needed!
- Light Stable Formulation
- Designed for specific life safety applications
- Can be applied to specific areas of the rotational molded part
- Suitable for outdoor or indoor applications

From Day.....

.....To Night

Overview

Chroma's has introduced a new light stable Photoluminescent material. These pigments have brighter and longer glow times than what was previously available. Some of our products have been measure by an independent lab to glow for over 29 hours!

Performance

Over 29 hours of glow has been measured in testing performed by independent laboratories.

Use and Handling Requirements

Use latex gloves to avoid contaminating the Photoluminescent Putty. The Putty is a safe and easy-to-shape material. Kneading the material first in your hand will aid in applying it to your mold surface easier and result in a higher quality part. Manually shape required quantity into desired form. Photoluminescent Putty can also be roll-formed or die-cut to a specific thickness, weights and shapes. Place the Photoluminescent Putty into mold prior to adding powdered polyethylene resin. Pack as tightly as possible to avoid air pocket formation in the outer skin. Proceed using normal production cycle times and temperatures. Remove part from mold. Photoluminescent Putty will cure at a rate relative to its thickness but faster than powdered resin because it is solid.

Product Trials

Products in the Chroma Glow Putty line are currently available in Blue or Green Glow in ten pound boxes.
